PROJECT DEVELOPMENT PHASE

Power BI Performance Test

Date	14 October 2026
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	

Performance Testing

Power BI is not part of the current Automated Network Request Management implementation. The project currently uses ServiceNow records and configured custom-table data for request processing. Power BI-based analytics and dashboards are treated as future scope, so the test records below do not claim unimplemented reports, visualizations, filters, or DAX queries.

S.No.	Parameter	Screenshot / Values	Evidence
1	**Data Rendered**	N/A - No Power BI report is implemented in the current Automated Network Request Management project.	Not Applicable
2	**Data Preprocessing**	N/A - Request data is stored and processed within ServiceNow records and configured custom tables, not Power BI.	Not Applicable
3	**Utilization of Data Filters**	N/A - No Power BI slicers or filters are implemented in the current project.	Not Applicable
4	**DAX Queries Used**	N/A - DAX is not used in the current project.	Not Applicable
5	**Dashboard Design**	0 Power BI visualizations/graphs in the current version. Advanced analytics/dashboard capability is future scope.	Not Applicable
6	**Report Design**	0 Power BI report visualizations/graphs in the current version.	Not Applicable

Current Analytics Boundary

• Current: request and operational information is maintained inside ServiceNow records and the configured Database Tables (u_database_tables) table.

• Current: workflow execution, approval status, lifecycle information, and operational records can be inspected through ServiceNow.

• Future: Power BI dashboards, report visualizations, slicers/filters, DAX-based calculations, and advanced analytics can be considered as an extension.

• No Power BI implementation evidence is claimed in the current project.

Conclusion

The current project does not contain a Power BI reporting layer. Therefore, data rendering, Power BI preprocessing, Power BI filters, DAX queries, dashboard design, and report design are N/A or zero where appropriate. The current implementation is validated through ServiceNow request data, workflow execution, approvals, notifications, security, and lifecycle records. Power BI analytics remains a future enhancement.
