Project Development Phase

Tableau Performance Test

Date	14 October 2026
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	

Performance Testing

Tableau is not used in the current implementation. The project's analytics and dashboard capability is future scope, so Tableau-specific performance evidence is recorded as N/A. The equivalent current data-processing activities are handled within ServiceNow through catalog variables, record mappings, Flow Designer, request/RITM records, and the configured operational table.

S.No.	Parameter	Values	Screenshot / Evidence
1	Data Rendered	N/A - No Tableau workbook or dashboard is implemented in the current version. Request and operational data are rendered through the ServiceNow portal and platform records.	Not Applicable; ServiceNow Network Request form / REQ / RITM evidence may be used for current implementation.
2	Data Preprocessing	N/A for Tableau. Current data preparation occurs through ServiceNow catalog variables, variable retrieval, field mappings, UI Policy behaviour, and Flow Designer configuration.	ServiceNow catalog variables and Flow Designer mapping evidence.
3	Utilization of Filters	N/A - No Tableau filters are implemented. Current request filtering/status handling is performed through ServiceNow request, RITM, approval, and record views.	Not Applicable for Tableau; ServiceNow request/status views are the current mechanism.
4	Calculated Fields Used	N/A - No Tableau calculated fields are implemented. The current solution uses ServiceNow form/workflow configuration and record fields rather than Tableau calculations.	Not Applicable for Tableau; ServiceNow field and workflow configuration evidence.
5	Dashboard Design	0 - No Tableau dashboards or visualizations are implemented in the current version. Advanced analytics/dashboarding is future scope.	Not Applicable.
6	Story Design	0 - No Tableau story visualizations are implemented in the current version. Story-based analytics is future scope.	Not Applicable.

Conclusion

The current project does not contain a Tableau analytics layer. Therefore, Tableau-specific rendering, preprocessing, filters, calculated fields, dashboards, and story visualizations cannot be performance-tested from the present implementation. The current data-processing and workflow behaviour is validated within ServiceNow. Tableau-based analytics can be evaluated if that future capability is implemented.
